GEORGY MALASHCHITSKY

Golang Backend Developer

Telegram: @Hironix_Rotifer vadbmak23@gmail.com

PROFESSIONAL SUMMARY

Go Backend Developer with 5+ years of experience building microservices and data-intensive backend systems. Strong background in system design, concurrent processing, and distributed event-driven architectures.

Experienced in independently designing service architecture and gRPC contracts, building reliable Kafka processing pipelines, and optimizing database interactions. Hands-on production experience, including performance profiling, incident investigation, and resolving complex backend issues.

WORK EXPERIENCE

Smartway · Moscow *Jan 2025 – Oct 2025*

Golang Developer / Software Engineer

- Owned the architecture and development of PULL and PUSH APIs for Trip.com integration, designing an extensible solution capable of handling up to 200 RPS in production.
- Built Kafka-based data processing pipelines with batching, database enrichment, manual offset management, retries, Dead Letter Queues, and idempotent message handling.
- Developed a JWT-based authentication service with session management, Redis-backed token revocation, REST middleware validation, and RBAC.
- Contributed to migrating internal order and personnel management services from PHP to Go, redesigning components and optimizing SQL queries and database interactions.
- Improved production diagnostics through Sentry integration, structured error context, critical-error alerts, and CPU/Heap/Goroutine profiling with pprof.

Messaggio · Moscow *Mar 2024 – Sep 2024*

Golang Developer

- Developed high-load Go microservices with a focus on concurrent processing, batching, and data deduplication.
- Implemented service communication using gRPC and Kafka, alongside REST APIs for external integrations.
- Improved development reliability through unit, integration, and load testing; worked with TDD, pprof, Docker, and Kubernetes.

X-Technologies · Moscow *Mar 2020 – Feb 2024*

Golang Developer

- Developed and maintained Go microservices for business workflows, calculation processes, and large-scale data processing.
- Independently designed gRPC APIs and Protocol Buffers contracts, defining service methods and inter-service communication.
- Implemented parallel processing mechanisms for resource-intensive workloads using Go concurrency primitives.
- Designed Hyperledger smart contracts, including a solution that automated the generation of service acceptance documents and delivery of calculated results to clients.
- Designed database structures and optimized data access in MongoDB and CouchDB.
- Supported production systems, investigated complex issues, delivered hotfixes, refactored code, and maintained unit tests.
- Collaborated with developers, analysts, and QA engineers; prepared technical documentation and user instructions.

TECHNICAL SKILLS

Languages	Go (Golang)
Backend & Architecture	Microservices, System Design, REST API, gRPC, Protocol Buffers, Event-Driven Architecture
Concurrency & Messaging	Goroutines, Parallel Processing, Kafka, Consumer Groups, Batching, Retry, DLQ, Idempotency, Offset Management
Databases	PostgreSQL, MariaDB/MySQL, MongoDB, CouchDB, Redis, Elasticsearch, ClickHouse, SQL Optimization
Performance & Reliability	pprof, CPU/Heap/Goroutine Profiling, Performance Optimization, JWT, RBAC, Session Management
Infrastructure & Engineering	Docker, Kubernetes, CI/CD, Grafana, Loki, Sentry, Swagger/OpenAPI, Unit/Integration/Load Testing, TDD, Code Review

EDUCATION

State College of Samara (GAPOU SGK) · Vocational Education

Information Security of Automated Systems · 2024

LANGUAGES

Russian — Native · English — B2
